Paper 1 Food Preparation and Nutrition

---

**Mark scheme**

June 2019

---

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from [aqa.org.uk](http://aqa.org.uk)

## Level of response marking instructions

Level of response mark schemes are broken down into levels, each of which has a descriptor. The descriptor for the level shows the average performance for the level. There are marks in each level.

Before you apply the mark scheme to a student's answer read through the answer and annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme.

### Step 1 Determine a level

Start at the lowest level of the mark scheme and use it as a ladder to see whether the answer meets the descriptor for that level. The descriptor for the level indicates the different qualities that might be seen in the student's answer for that level. If it meets the lowest level then go to the next one and decide if it meets this level, and so on, until you have a match between the level descriptor and the answer. With practice and familiarity you will find that for better answers you will be able to quickly skip through the lower levels of the mark scheme.

When assigning a level you should look at the overall quality of the answer and not look to pick holes in small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level and then use the variability of the response to help decide the mark within the level, ie if the response is predominantly level 3 with a small amount of level 4 material it would be placed in level 3 but be awarded a mark near the top of the level because of the level 4 content.

### Step 2 Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will help. There will be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example.

You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the Indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

<b>Section A</b>			
<b>Question</b>	<b>Answer Key</b>	<b>Assessment Objective</b>	<b>Total marks</b>
<b>1.01</b>	A – Pasta	AO1	1
<b>1.02</b>	D – Proteins	AO1	1
<b>1.03</b>	C – Nuts	AO1	1
<b>1.04</b>	D – Lactose	AO1	1
<b>1.05</b>	C – Removal of waste	AO1	1
<b>1.06</b>	A – Stir frying	AO1	1
<b>1.07</b>	D – Food security	AO1	1
<b>1.08</b>	B – Dextrinisation	AO1	1
<b>1.09</b>	B – Doughnuts	AO1	1
<b>1.10</b>	B – Plasticity	AO1	1
<b>1.11</b>	A – Raw chicken	AO1	1
<b>1.12</b>	D – Tomatoes	AO1	1
<b>1.13</b>	C – Cheese	AO1	1
<b>1.14</b>	C – Blue	AO1	1
<b>1.15</b>	C – Rickets	AO1	1

<b>1.16</b>	B – Air	AO1	1
<b>1.17</b>	B – Hollandaise sauce	AO1	1
<b>1.18</b>	C – Gelatinisation	AO1	1
<b>1.19</b>	D – control the metabolic rate	AO1	1
<b>1.20</b>	A – Proteins	AO1	1

<b>Section B</b>			
<b>Qu</b>	<b>Part</b>	<b>Marking guidance</b>	<b>Total marks</b>
<b>02</b>	<b>1</b>	<p><b>Give three different reasons why food is cooked.</b></p> <p><b>Marking guidance</b></p> <p>This question is assessed against AO1</p> <p>1 mark for each <b>different</b> response given from the list below</p> <p><b>Award 1 mark for each different response given from the list below</b></p> <p><b>Food is cooked to:</b></p> <ul style="list-style-type: none"> <li>• To make food safe to eat/prevent food poisoning</li> <li>• To destroy harmful microorganisms e.g. bacteria/pathogens/mould/yeasts and toxins</li> <li>• To develop and intensify flavours in foods/improve taste. (Flavour and taste can be credited but only one mark, not two)</li> <li>• To improve the sensory characteristics and organoleptic qualities.</li> <li>• To change the appearance of foods/add colour/look more appetising</li> <li>• To improve/change the texture.</li> <li>• To tenderise and soften fibres in meat, fish and vegetables.</li> <li>• To make foods less bulky and easier to eat and digest.</li> <li>• Improve the shelf life/keeping qualities/make food last longer.</li> <li>• Give variety in the diet</li> <li>• Improve the aroma/smell of food</li> <li>• Specific examples should be credited eg to allow pasta to gelatinise, to pasteurise milk to extend shelf life.</li> <li>• Any reason relating to nutrition needs to give an example e.g. steaming broccoli retains the water-soluble vitamins.</li> </ul> <p><b>Any other valid responses should be credited.</b></p>	<b>3</b>

02	2	<p><b>State four different factors that influence food choice when planning a meal.</b></p> <p><b>Marking guidance</b></p> <p>This question is assessed against AO1</p> <p><b>Award 1 mark for each valid point.</b></p> <ul style="list-style-type: none"> <li>• Income/budget</li> <li>• Price/cost of ingredients.</li> <li>• Food availability</li> <li>• Seasonality (moved) – e.g. strawberries in June, BBQ in the summer.</li> <li>• Weather e.g. hot food on a cold day</li> <li>• Time of day</li> <li>• Time of year</li> <li>• Culinary skills</li> <li>• Lifestyles</li> <li>• Age</li> <li>• Gender</li> <li>• Number of people planning the meal for</li> <li>• Portion size</li> <li>• Physical activity level (PAL) (moved)</li> <li>• Time available to prepare/cook (moved)</li> <li>• Equipment/Facilities available</li> <li>• Allergies and food intolerances</li> <li>• Health issues which may affect food choice.</li> <li>• Dietary requirements</li> <li>• Nutritional value of ingredients.</li> <li>• Planning meals for a healthy balanced diet/Eatwell guide</li> <li>• Culinary traditions and beliefs (e.g. religious beliefs).</li> <li>• Ethical and moral beliefs and influence e.g. vegetarian,</li> <li>• Making environmentally friendly choices.</li> <li>• Advertising and marketing (e.g. food promotions such as 3 for 2, buy one get one free, buy one get one half price)</li> <li>• Celebrating special occasions and events.</li> <li>• Enjoyment, likes, dislikes and general eating habits or patterns.</li> <li>• Sensory qualities of food may be credited, only one mark maximum.</li> </ul> <p><b>Any other valid responses should be credited.</b>  <b>One word answers are allowed.</b></p>	4

<p>nutrition and the Eatwell guide referred to in the indicative content.</p> <p><b>Evaluation</b> draws some conclusions which highlight points required for a healthy diet, some for an active male adult and includes 3-4 relevant justified reasons which are linked to analysis/findings.</p>	
<p>Responses will include limited factual explanations linked to the nutritional needs and/or energy needs of the active male adult and will include reasons to justify a meal choice that shows basic knowledge and understanding of their dietary needs and/or energy balance which includes limited reference to the Eatwell Guide. There may be an imbalance between analysis and evaluation where one aspect may be omitted or stronger.</p> <p><b>Analysis</b> is limited and comparison of the meals refers to 1-2 separate points relating to the ingredients, energy balance, nutrition and the Eatwell guide referred to in the indicative content.</p> <p><b>Evaluation</b> draws basic conclusions with limited reference to the requirements of a healthy diet for an active male adult and includes 1-2 reasons linked to their analysis of the data provided.</p>	<p>1 - 4 marks</p>
<p>Nothing worthy of credit</p>	<p>0 marks</p>
<p><b>Indicative content</b></p> <p><b>Choice A - Spaghetti Bolognese</b> is higher in fibre, lower in fat, lower in saturated fat, lower in salt and sugar compared with choice B. All of these factors support healthy eating.</p> <p>The following relates to the nutrition of the ingredients in each dish.</p> <p><b>Nutrients in ingredients:</b></p> <p><b>Fibre</b> – whole wheat pasta, tomatoes, onions, green peppers, mushrooms, celery and basil.</p> <p><b>Low(er) fat ingredients</b> – <b>Lean</b> minced beef, pasta, all vegetables. Higher fat ingredients – Vegetable oil (used in small quantity)</p> <p><b>Salt</b> – The Parmesan cheese and the added salt are used for flavour but the amounts are not excessive.</p> <p><b>Sugars</b> - There are natural fruit sugars in the vegetables (intrinsic), no sugar is added.</p> <p><b>5-a -day</b> – The vegetables; tomatoes, onions, green peppers, mushrooms, celery and basil contribute to the government recommended 5-a-day</p> <p><b>Micronutrients</b> – The meat, pasta and mushrooms provide vitamin B1 The vegetables provide vitamin C, especially the tomatoes and green peppers.</p>	

	<p>Calcium is provided by the cheese, pasta and basil.          Ingredients high in <b>energy</b> are; The pasta, beef and vegetable oil  <b>Choice B - Cheese and onion pasty and chips with tomato ketchup</b> is lower in fibre, higher in fat, higher in saturated fat, higher in salt and sugar.</p> <p><b>Nutrients in ingredients:</b></p> <p><b>Fibre</b> – potatoes, flour, onion  <b>Low(er) fat ingredients</b> – Wheat flour, potato, tomato ketchup  <b>Higher fat ingredients</b> – Vegetable oil, lard and Cheddar cheese. Lard and cheddar will be high is saturated fat.  <b>Salt</b> – Salt, tomato ketchup and Cheddar cheese  <b>Sugars</b> - Free sugar in the tomato ketchup, fruit intrinsic sugars in the onion and potato  <b>5-a -day</b> – The onion is the only ingredient which would count and this is not a main ingredient. (Potatoes would not count as they are classified as a starchy carbohydrate)  <b>Micronutrients</b> – The potatoes, tomato ketchup and wheat flour provide vitamin B1          The potatoes provide vitamin C,          Calcium is provided by the Cheddar cheese and wheat flour.          Ingredients high in <b>energy</b> are; The vegetable oil, wheat flour, potato, Cheddar cheese and lard.</p> <p>However, there are some nutrients/energy balance points which could be used in favour of choice B and these points should be credited.</p> <p>Both meals are high in B1 (thiamin). This is important as it helps to release energy from carbohydrates which is especially important for an active male. Eating excess B1 is not harmful as the body does not store it, but excretes in the urine.</p> <p>Both meals provide a good amount of vitamin C. This is a water-soluble vitamin so the body needs a daily supply. Eating excess vitamin C is not harmful as the body doesn't store it but excretes it in the urine. Also, vitamin C is easily destroyed by storage, preparation, cooking and being kept warm it is important to have a good supply to allow for this.</p> <p>The meals both contain similar amounts of calcium. Calcium is an important mineral needed for strong bones and teeth, and so a good supply is essential. In choice B, calcium is particularly high due to the Cheddar cheese and white flour (In UK, white flour is fortified with calcium by law). The spaghetti Bolognese has a good amount of calcium, being supplied mainly from the Parmesan cheese and the whole wheat pasta.</p> <p>The salt in the spaghetti Bolognese is about a third of the recommended amount, and that is acceptable.</p> <p>The sodium in the cheese and onion pasty is too high, this one meal contains more than the daily maximum salt consumption of 6g per day. A diet high in salt can lead to high blood pressure which is a risk factor for cardiovascular disease which includes coronary heart disease and strokes.</p> <p><b>Table 2 shows the % of energy from each nutrient</b></p>	
--	---	--

	<p>The ideal % recommended energy from the macronutrients in the UK is as follows:</p> <p>Carbohydrate 50% (of which max. 5% from free sugars)          Fat 35% (or less) (of which max. 11% from saturated fat)          Protein 15%</p> <p>Choice A matches the ideal % more closely. It is healthy as it is lower in fat 29% as compared to 55% in the pasty and chips meal. A diet high in fat can lead to long term effects on health such as obesity, cardiovascular disease which includes coronary heart disease and strokes.</p> <p>The carbohydrate is 51% in choice A as compared to only 38% in choice B. Choice A has starchy carbohydrates which are high in fibre. The carbohydrate % is too low, this is because the meal is high in fat. The carbohydrate comes from refined starchy carbohydrate – chips and the white flour in the pastry.</p> <p>The protein % in each choice is 20% for choice A and 7% for choice B. Therefore, choice A is closer to the recommended %.</p> <p>However, there are still <b>some</b> benefits for choice B – cheese and onion pasty, chips and tomato ketchup.</p> <p>The energy content of meal A is high and the energy content of choice B is very high – based on this either meal could be justified as being suitable for an active male adult. If insufficient energy is consumed for a prolonged period, weight loss would occur. If excess energy is consumed for a prolonged period of time, weight gain would occur. Bradley is an active male and therefore physically active. He will have a good Physical Active Level (PAL) and therefore use the energy. Being physically active: reduces the risks of several diseases, improves general health.</p> <p><b>Any other valid responses should be credited.</b></p>	
--	---	--

03	2	<p><b>Give three functions of water in the body.</b></p> <p><b>Marking guidance</b></p> <p>This question is assessed against AO1</p> <p><b>Award 1 mark for each valid point.</b></p> <ul style="list-style-type: none"> <li>• Vital to life/would die</li> <li>• Prevents dehydration/ for hydration</li> <li>• Regulation of body temperature e.g. sweating</li> </ul>	3
----	---	--	---

		<ul style="list-style-type: none"> <li>• Allows (internal) organs to function correctly</li> <li>• Chemical reactions in the body use water</li> <li>• Absorption of nutrients</li> <li>• Keeps correct concentration of nutrients.</li> <li>• Medium for dispersing nutrients</li> <li>• Needed for digestion of food</li> <li>• Removal of waste from the body/prevents constipation</li> <li>• Keeps skin moist and healthy</li> <li>• Water controls and regulates blood pressure and heart rate</li> <li>• To keep body fluids at the correct concentrations e.g. blood, saliva, urine.</li> <li>• To help brain function and or concentration</li> </ul> <p><b>Any other valid responses should be credited.</b></p>

Wrong flour – not enough gluten	Use bread flour / strong flour/ strong plain flour/pasta flour/ '00' flour.	Wrong flour – wholemeal flour – too much bran in flour which causes crumbliness.	Use white flour or a mixture of wholemeal and white flour to improve the handling qualities of the dough	Not enough liquid	Use more egg/water/oil, liquid to bind	Insufficient kneading and/or mixing	Increase kneading/mixing time (until smooth and stretchy). Use a food processor for mixing.	Dough not rested before shaping	Increase resting time.	Left in fridge for too long before rolling/	Chill for less time, wrap well to avoid dehydration of dough	Left uncovered in the refrigerator	Wrap well with cling film or in a plastic bag	Inaccurate weighing/measuring of ingredients	Weigh carefully using reliable scales/digital scales and easy-to-read measuring jugs.	An all-in-one Victoria sandwich cake has a dense texture.	Wrong flour – eg plain flour	Use baking powder with plain flour or use SR flour	No raising agent has been used	Use baking powder with plain flour or use SR flour	Incorrect sugar, not allowing the all-in-one method to aerate the cake mixture.	Use caster sugar
Problem	Causes of problem	Prevention																												
Fresh pasta has a crumbly texture and could not be shaped.	Wrong flour – not enough gluten	Use bread flour / strong flour/ strong plain flour/pasta flour/ '00' flour.																												
	Wrong flour – wholemeal flour – too much bran in flour which causes crumbliness.	Use white flour or a mixture of wholemeal and white flour to improve the handling qualities of the dough																												
	Not enough liquid	Use more egg/water/oil, liquid to bind																												
	Insufficient kneading and/or mixing	Increase kneading/mixing time (until smooth and stretchy). Use a food processor for mixing.																												
	Dough not rested before shaping	Increase resting time.																												
	Left in fridge for too long before rolling/	Chill for less time, wrap well to avoid dehydration of dough																												
	Left uncovered in the refrigerator	Wrap well with cling film or in a plastic bag																												
	Inaccurate weighing/measuring of ingredients	Weigh carefully using reliable scales/digital scales and easy-to-read measuring jugs.																												
An all-in-one Victoria sandwich cake has a dense texture.	Wrong flour – eg plain flour	Use baking powder with plain flour or use SR flour																												
	No raising agent has been used	Use baking powder with plain flour or use SR flour																												
	Incorrect sugar, not allowing the all-in-one method to aerate the cake mixture.	Use caster sugar																												

		Fat melted before mixing	Use softened butter or fat spread to allow air to be beaten in to the mixture (melting does not allow air to be beaten in)
		Not beaten/whisked for long enough	Beat/whisk for longer
		Cake put into cold oven	Pre-heat oven before the cake goes in.
		Oven temperature is too low	Increase oven temperature
		Oven door opened during cooking which caused cake to sink	Don't open door too soon (e.g. until cake has risen and set)
		Cake not cooked for long enough	Cook for required time until golden, firm and skewer comes out clean/ finger press to bounce back
		Cake left in tins to cool (allowing condensation to dampen cake).	Use a cooling rack – remove cakes from tin about 5 mins after end of cooking time
		Inaccurate weighing/measuring of ingredients	Weigh carefully using reliable scales/digital scales and easy-to-read measuring jugs.
		Incorrect fat used e.g. low-fat spread, which has a high water content	Use butter or a fat spread without additional water.

04	2	<p><b>Suggest four ways supermarkets and shops could reduce food waste.</b></p> <p><b>Marking guidance</b></p> <p>This question is assessed against AO2</p> <p><b>Award 1 mark for each valid point, either from the list below or other relevant responses worthy of credit</b></p> <p><b>Indicative content</b></p> <ul style="list-style-type: none"> <li>• Regularly check use-by and best before dates on food – <b>allow sell by date.</b></li> <li>• Selling food past its best before date – at a reduced price</li> <li>• Invest in new technology to monitor date marks on food and to sell these off while still in-date.</li> <li>• Rotate stock, first in first out</li> <li>• Consider which buy-one-get-one-free offers to provide and avoid these on highly perishable foods with a short date mark on them</li> <li>• Store foods in the correct conditions and at correct temperatures.</li> <li>• Frozen – below -18°C Fridge 0°C to below 5°C (or legally up to 8°C) Hot food eg chicken rotisserie -minimum serving temperature of 63°C, ambient around 17°C</li> <li>• Sell imperfect fruit and vegetables at discounted prices.</li> <li>• Provide different sized containers for self-service bars so over purchase of food is not encouraged.</li> <li>• Sell loose foods to allow customers to buy just what they need</li> <li>• Provide secure and protective packaging to protect food from damage</li> <li>• Provide composting instructions on food labels</li> <li>• Distribute surplus food to charities/food banks</li> <li>• Provide recipe cards to help customers use left-over foods.</li> <li>• Oils that are left over may be converted into bio-diesels and when there are no alternatives, energy is generated by anaerobic digestion and incineration.</li> </ul>	4
